Safety First

In light of recent events at the Crandall Canyon Mine in Huntington Utah, where six miners remain trapped after a cave in, Stoneco again recognized the importance of Safety. On Tuesday August 21st all of our employees participated in a company wide "Safety Stand Down". It involved all of our quarry personnel coming to our Denniston Quarry for an hour to reflect on safety with a safety presentation from our Safety Coordinator, refreshments, and time to talk with their fellow miners. Safety is our people going home safely each and every day. Safety has been and will always be our number one priority. Our very best wishes, hopes, and sympathy go out to the family, friends, and co-miners at Crandall Canyon.

Ann Arbor Crushed Concrete

With the large amount of inbound off load concrete coming into our crushed concrete yard from the Carpenter Road reconstruct, we are lowering the price on our 21AA Crushed Concrete to \$5.00 per ton. This new lower price will become effective September 3rd and will remain in effect until further notice. The facility is located at 3660 Carpenter Road, Ypsilanti, MI 48197 across from the Meijer and Target shopping centers.

NEW & EXCITING

Customer service remains one of our top priorities, and as such we need your input to make things better. In an effort to organize your thoughts we have created an online survey at www.stoneco.net please take a few minutes and let us know how we can better serve you.

Ida Sand – Hours

Our Ida Sand pit located at 2629 Lowe Road will now be open Monday through Friday from 7am until 4pm. We are able to stay later and open Saturdays upon request, please contact Ryan Lumpford to arrange any special hours. The pit is located one mile east of US-23 off exit 13 (*Ida West Road*). We currently have fill sand and screened topsoil available to service any project.

Aglime

We currently have high quality aglime available at both our Maybee and Ottawa Lake Quarries ready to be spread this fall. The material has been tested and proven to be some of the best in the area for neutralizing value and spread-ability. Agronomists are discovering more and more that the spread-ability of aglime has a major impact on the overall value of the product. While neutralizing value still plays the major role, how well the material spreads is the key factor to whether you are getting the aglime to where it needs to be applied. Next time you need lime, give ours a try you and your customers will be happy you did.
